

PG&E's Better Together Giving Program

STEM Scholarships

At PG&E we believe in the power that education has in strengthening a community. To give our next generation of Californians more opportunities to learn and succeed in higher education, PG&E is awarding scholarships to help further the studies of local students interested in being a part of California's clean energy future.

This year PG&E is awarding \$5,000 scholarships—renewable up to 4 years—to diverse students pursuing STEM studies in California schools.

Targeted majors include:

- Engineering (electrical, mechanical, computer, industrial, environmental)
- Computer Science/Informational Systems
- Cyber Security
- Environmental Sciences

High school seniors, current college students, veterans and adults returning to school are encouraged to apply. Eligible students will be evaluated based on demonstration of community leadership, academic achievement, financial need and expressed interest in the energy sector.
